

emfinsource

**In-house service
with outsource flexibility**

Do you need a broad range of optical coatings? Are you struggling with your in-house coatings or thinking about acquiring coating capabilities? EMF can help.

emfinsource is a comprehensive service program that functions like an in house coating department. We offer a broad range of services from consulting, design and specification development to production and equipment management.

DEVELOPMENT PROJECTS

Our engineers work directly with customers to jointly develop new coatings and applications. The starting point for these projects is "I want a coating that will do this. What do you think?" That's when our engineers go to work and the collaboration begins.

EQUIPMENT PROCUREMENT AND MANAGEMENT

We can help you define equipment requirements and qualify a short list of potential vendors. EMF staff will operate and maintain the coating equipment at your site or in our facility.

SBIR/STTR PROGRAMS

We partner with organizations and academic institutions to develop commercial applications of innovative concepts with grants from programs such as Small Business Innovative Research and Technology Transfer Research. In 2003, EMF Corporation and Cornell University received a contract from the Missile Defense Agency's STTR program to develop high-reflector coatings.

If you would like to learn more about partnering with EMF call Megan Shay at 1-800-456-7070.
